Buckman[™]
Chemistry, connected.

OUR COMMITMENT:

To make your tissue softer, fiber more versatile and production more efficient.

A global leader in tissue innovation, Buckman is committed to improving tissue properties and the processes that produce them. We can help your mill make tissue softer, faster and more economically. We can also help you save energy and be more sustainable while increasing your productivity. We can help you monitor your processes, troubleshoot more quickly and prolong equipment life.

Buckman provides advanced dryer adhesives, unique film modifiers and coating extenders that increase the quality and speed of manufacture for TAD, conventional and hybrid structured tissue machines. We can support your processes with monitoring capabilities such as Natural Coating Analyzer and Vibration Analyzer. And we offer on-site collaboration and the customer-specific support your mill needs to not only address emerging challenges but also capitalize on new opportunities. All so you can gain a competitive edge in the marketplace and realize a significant return on investment year after year.

Strong commitment. Soft touch. That's the promise of Buckman tissue technologies.

BUCKMAN EXPERTISE

Softness improvement | Fiber modification | Yankee coating | Softeners and debonders | Temporary wet strength
Dry strengths | Absorbency aids | Wet end chemistry optimization | Smart technology
