

OPTIMIZE PRODUCT PERFORMANCE — IN THE CAN, ON THE JOB, AND ON THE BOTTOM LINE

Make performance chemicals from Buckman a part of the mix.

You want to produce formulations that always perform their best. That's why Buckman offers a broad range of chemistries for coatings and plastics that boost and protect product quality and ensure long-lasting performance with outstanding resistance to corrosion, rust, staining, and fire. With Buckman performance chemicals and our hands-on expertise, you can gain an edge in the marketplace, increase customer satisfaction, ensure compliance, and improve sustainability. Best of all, you can paint a better financial picture for your entire operation.

BUCKMAN CAN GIVE YOU COMPLETE CONFIDENCE IN YOUR PRODUCT'S PERFORMANCE

Whether you are producing primers, topcoats, sealants, plastics or other synthetics, Buckman has a full range of chemistries that improve both the product and the manufacturing process.

Win the fight against corrosion

Look to Buckman for these effective anticorrosive pigments for use in both solvent-based and water-based systems.

MFP

- Anticorrosive pigment based on modified barium metaborate
- Suitable for use in solvent and water-based systems

Butrol® 9102M

- Anticorrosion pigment based on micronized calcium metaborate
- Suitable for use in solvent and water-based systems

Butrol® 9103M

- Anticorrosive pigment based on micronized calcium metaborate and zinc oxide
- Suitable for use in solvent and water-based systems

Note: All borate anticorrosive pigments provide protection of zinc in galvanized steel and zinc-rich primers.

Get outstanding rust prevention

Buckman can help you successfully control early and flash rust in products applied to ferrous substrates.

Butrol® 35FE

- Liquid flash and early rust inhibitor
- In-can corrosion inhibitor
- For use in water-based systems

Ensure in-can preservation

In addition to in-can corrosion prevention, Buckman offers microbial protection to keep coatings fresh.

Busan® 1058

- An in-can preservative for pigment slurries and water-based paints
- Effective against a wide range of microorganisms that can spoil the product

Choose from variety of advanced fire retardants

Rely on Buckman for fire retardant additives that can improve fire protection in coatings, plastic materials, glue, fillers, sealants and other products.

MFP & Butrol® 9102M

- Buckman products based on either a modified Barium Metaborate fire retardant pigment or micronized calcium metaborate fire retardant pigments
- Suitable for use in solvent and water-based paint systems
- Also suitable for use in a wide range of plastics
- Typically used as a partial replacement for antimony trioxide
- Works best when used in conjunction with a halogen donor

Get effective catalytic and synthesis support

Depend on Buckman to help you improve processing and production.

Bulab® 600HP

- A 99% tertiary amine catalyst for polyurethane flexible and rigid foam systems
- Precursor for synthesis of a range of chemicals

Optimize pigment dispersal

Buckman dispersants offer outstanding pigment dispersion, provide long-term viscosity stability, and help prevent crystal formation and agglomeration of pigment.

Busperse® 47

- A viscosity depressant for high solids solvent-based coatings

Busperse® 229

- A combination of dispersants for water-reducible paints that provide good pigment dispersion and minimize blistering and adhesion loss

Busperse® 275

- An anionic pigment dispersant—no phosphates
- Good compatibility with other dispersants

Lock tannin staining

Specially formulated for coatings that are applied over staining woods, such as cedar and redwood, Buckman's stain inhibitors prevent bleed-through and the discoloration that tannin can cause.

MFP

- A long established tannin stain inhibitor, which forms colorless, insoluble tannates in water-based coatings to prevent discoloration

Bubond® 357 and Bubond® 396

- A new approach to tannin staining inhibition—this liquid product chelates the metal ions in water-based coatings, preventing tannins from precipitating out to discolor the film
