

LEATHER TECHNOLOGIES

OUR COMMITMENT:

To bring innovative technologies to leather processing, so you can bring better-quality leathers to market.

Few industries have been around as long as leather. Few products are as durable or as beautiful. Buckman has a commitment to match. We are the industry leader in hide preservation and microorganism control programs. We also provide breakthrough enzymatic solutions for wetblue processing. Look to us for superior beamhouse and tanyard systems as well as wet-end and finishing applications—chemistries that enhance how your leathers perform in every phase of the process and, ultimately, how they perform in the marketplace.

Whether you want to improve your wetblue or your bottom line, we can help your operation become more efficient and more sustainable every step of the way.

Steadfast commitment. Long-term success. That's the promise of Buckman leather technologies.

Buckman

Commitment makes the best chemistry.

BUCKMAN EXPERTISE

| Hide preservation | Soaking | Unhairing & liming | Deliming & bating | Pickling | Tanning | Neutralizing |
| Retanning | Dyeing | Fatliquoring | Finishing | Effluent treatment |

APPLICATIONS AND PRODUCTS

Aurora®: ecological solutions	Bubond®: fixatives	Bubreak®: defoamers	Bufin: finishing products
Bufloc®: flocculants & coagulants	Busan®: bactericides, fungicides & preservatives		
Busperse®: degreasers, dispersing agents & other auxiliaries	Butan: tanning agents, syntans & retanning auxiliaries		
Butan Oil: fatliquors, oils & waxes	Buzyne®: enzymatic products
