

LEATHER TECHNOLOGIES

GROW PROFITS, NOT MOLD.

Preserve wet leather integrity with Busan[®] 7654 fungicide from Buckman.

A fungal outbreak can compromise the physical and chemical properties of leather, leading to staining and other downgrading problems. And that can be very costly.

Unfortunately, your wet leathers are especially vulnerable. That's why you need complete, effective mold control. Buckman's advanced Busan 7654 fungicide safeguards your wet leathers. So the only thing that grows in your operation is your bottom line.

WITH BUSAN[®] 7654, MOLD CAN'T TAKE HOLD.

Better protection for all your leathers.

Fungal spores are just waiting for an opportunity to settle into moist leathers. But Buckman can stop them. Our concentrated, micro-emulsion formulation rapidly disperses and penetrates leather to provide advanced protection against a broad spectrum of fungal organisms. Busan 7654 can help protect all your leathers, including:

- Wetblue
- Wet white
- Vegetable tanned
- Free-of-chrome
- Wet crust

Proper application ensures that your leathers have long-term protection too—in storage, during transportation, and beyond.

Worry-free. Hassle-free.

Benefits of a Busan 7654 program from Buckman include:

- Rapid dispersal in high electrolyte solutions (pickle, vegetable, chrome-tanning liquor)
- Outstanding uptake by the leather
- High efficacy with minimal doses
- Compliance with the EU's Biocidal Product Regulation
- Accepted by all leather Eco-labels and brands

The biggest benefit of all is the confidence you'll have in your fungicide program. Your Buckman technician can ensure the right dosage for optimal control and then monitor your operation for ongoing peace of mind.
