

Recreational Water Products

The clear choice in pool and spa protection

MAKE A BIG SPLASH

with
recreational
water
applications
from
Buckman

There's nothing more inviting than a clear, clean swimming pool or spa. Keep it that way, with proven water treatment solutions from Buckman. Our extensive line of recreational water applications will help keep water clear, surfaces clean and equipment functioning smoothly all season long. And that means you can reduce the time and effort required for pool maintenance, help ensure high pool user satisfaction and lower your overall costs.

When it comes to water technologies, nobody dives deeper.

Buckman is a global leader in water treatment technologies, so nobody understands pool chemistry better. In-depth research, testing and refinement yield pool products that are more effective, easy to use and cost-efficient. That's why pool maintenance professionals working in residential, hotel, college, private club and other environments rely on our products and expertise. And why you can look to Buckman to help you successfully control the algae, scum, staining and harmful scale buildup that can undermine pool performance.

A broad range of products to meet all your recreational water needs

Our solutions are formulated to work equally well in gunite and liner pools, halogenated and saline waters, and all commonly used filters, including sand, cartridge and diatomaceous earth systems.

Keep algae out

Algal growth is enemy number one. Fortunately, you need only one solution to stop it:

WSCP®

The world's leading algaecide. Its polymeric concentrate formula provides effective control of green free-floating algae and the black algae that cling to the walls and bottoms of pools. It kills many types of bacteria as well. Effective at all pH levels, WSCP won't cause foaming like many other algaecides—even in high concentration slug doses. The result is a pool that sparkles.

Remove and prevent stains and corrosive deposits

Frequent use of chlorine and other oxidizers lead to corrosion, scale buildup, and fouling. In addition, high alkalinity and the use of some oxidizers containing calcium can lead to the precipitation of mineral scale. Buckman has just the right solution to help you put a stop to unsightly and destructive iron and mineral deposits:

PHOS

Reduces inorganic scale formation in recirculating pumps, pool heaters and filters. This line of products is formulated to help keep pool and spa shells stain-free. Choose from:

PHOS 6: An aqueous solution of HEDP.

PHOS 9: A PBTC formula.

PHOS 12: A solution of DTPMP.

BPL® 3553

Inhibits and removes scale and deposits caused by calcium, magnesium, barium and aluminum. This formula includes anionic dispersants to keep your pool stain-free and metal parts in recirculation and filtration systems protected.

BPS® 3556

Cleans up inorganics from pool water and decreases the oxidizer-phosphonate reaction, resulting in extended life of both components in the system. It also prevents iron and manganese stains in the pool, which, in turn, enhances the effectiveness of anionic polymers used to control scale and discoloration.

Eliminate scum and water rings

Heavy swimming pool and spa use can lead to contamination from suntan oils and lotions, human skin oils, foods and even pets who get in on the fun. These oils can entrap dirt, bacteria, yeasts, water molds and algae, which then build up on swimming pool and spa surfaces and in the skimmer. For these challenges, Buckman offers a range of solutions that can help you reduce oxidizer use. Options include the following enzyme-based products:

BPL 3550

A patented chemistry that facilitates pool surface cleaning, enhances pool water clarification and prevents "bathtub rings."

BPL 3551

Removes "scum bubbles" and "bathtub rings" in spas. This spa cleanliness and clarification product also should be used in Jacuzzis® and hot tubs. It contains a unique formula that breaks up oil-based deposits to make cleaning easy.

BPL 3552

Degrades sticky materials that emanate from suntan lotions and other contaminants. This stable enzymatic formulation is comprised of natural, nonirritating ingredients. BPL 3552 helps to extend filter runs, keeps piping free of organic deposits, and reduces sanitizer demand when used regularly.

Optimize pool clarification with BPL[®] cationic polymers

Eliminate the suspended solids that cause turbidity and haze with our BPL cationic polymers. They work to neutralize and bridge coagulated particles so they can be more effectively filtered. Available in a variety of molecular weights so you can get just the right viscosity, our polymers dilute easily with water and are stable in the presence of chlorine, bromine and hydrogen peroxide.

Swimming Pools Products

WSCP[®]
PHOS 6
PHOS 9
PHOS 12
BPL[®] 3550
