

Buckman Coal Dust Solutions

Move the coal. Stop the dust.

Protect your operation and the environment with Coal Dust Control from Buckman.

Coal dust is bad for the environment, equipment, and people. And that's bad for business. That's why Buckman provides a complete Coal Dust Control System designed especially for coal transport and storage. Cost effective and easy to apply, our internationally patented formula produces a high-quality sealing compound on the coal surface to keep dust where it belongs—on the coal and out of the air.

Put a seal on your coal dust problems.

Coal transport and dumping

Buckman's Coal Dust Control System forms a dense, elastic, and durable crust-like shell that keeps your freight secure in the railcar and prevents the release of dust. It also effectively controls dust during rotary dumping where air quality is especially at risk. You can depend on our patented system to:

- Promote superior dust cohesion
- Prevent mineral scatter
- Protect your freight
- Preserve the environment
- Protect the health and safety of your workers

Coal storage

Our formula works equally well for coal storage.

- Prevents wind-blown loss
- Decreases the chance of self-ignition
- Decreases mineral water content
- Reduces mineral oxidation

- Reduces moisture in treated coal
- Reduces the loss of combustion heat for evaporation
- Increases total calorific value from treated coal

Easy application

Buckman's automatic dosing equipment features fully adjustable sprayers that provide an even coating on the coal surface quickly and easily. Our system is designed to maximize control and minimize waste.

Save time and money

Buckman's Coal Dust Control System helps you maintain a cleaner operation, and that can put a shine on your bottom line and your corporate image. It can help you achieve:

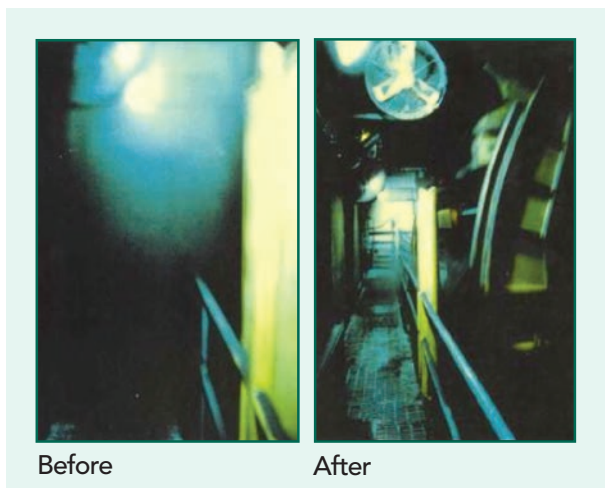

- Lower train maintenance and cleanup costs
- Better, more efficient working conditions
- The goodwill of nearby communities
- A cleaner public image

Look to Buckman for all your dust control needs

We can provide the mining industry with a variety of other dust-related services, too, from road dust control to specialized monitoring and testing.
