

Take a big step forward in reverse osmosis.

Bulab® products are cost-effective solutions for water treatment problems common to RO systems. Our products are formulated to be used on both thin-film composite and cellulose-acetate membranes.

Scale inhibitors and dispersants

Buckman uses proprietary blends of phosphonates and polymer chemistries that are optimized to inhibit and disperse specific scales and foulants that can adversely affect your system.

Microbicides

A recognized leader in microbiological research and control, Buckman provides high-performance, oxidizing and nonoxidizing biocides to control microorganisms in your system.

Membrane cleaners

The Permeate Protection Program includes acidic and alkaline formulations designed to remove inorganic and organic foulants. The result is improved performance and longer element life for reduced operational costs.
